# MINI AIR Z2-Z22 I13GD INDUSTRIAL VACUUM

## ASPIRATORI INDUSTRIALI ATEX ED ACD

The **MINI AIR Z2-Z22** is a powerful and versatile **ATEX Z22 certified compressed air vacuum cleaner**, useful for various **industrial applications**. It is equipped with **2 ejectors** which, working in parallel, guarantee **maximum performance**. Each ejector is adjustable to provide **more airflow** or **more vacuum** depending on the application. Inside the **vacuum cleaner**, there is a large surface filter in **antistatic polyester** (15,000 cm<sup>2</sup>), **M class certified** with a **filtration efficiency** of 1 micron, to vacuum **electrostatically charged dust** in total safety. An **H14 filter** is available as an option to **pick up the finest dust**. To clean the filter there is a very effective **manual filter cleaning system** as standard. Thanks to a lever outside the filtering chamber, the operator is able to **shake the filter** and **deposit the dust directly in the collection container**. A large **45 Lt release container** on wheels allows you to **easily empty the vacuumed material**.

## HIGHLIGHTS

### SUCTION UNIT

The vacuum cleaner is equipped with two ejectors which generate, without the use of mechanical elements, a remarkable depression inside the chamber, thus making suction possible.

### FILTER SHAKER

On one side of the filter chamber there is an ergonomic manual shaker through which the operator can easily and quickly clean the filter, removing any dust and debris from its surface. Thanks to this smart cleaning system the operator can carry on working without needing to change or wash the filter.

### FILTERING ELEMENT

The main filter is made of sturdy antistatic polyester. Inside the fabric, there is a conductive net which avoids any electrostatic charge. The star shape ensures a large filter surface in a compact space and the passage of the air also when the filter is dirty. The fabric of the filter is M class (BIA | EN 60335-2-69) certified. It means that all particles until 1 micron are stopped by the filter, so as to protect the suction unit and the operator around the vacuum cleaner.

### COLLECTION BIN

The vacuumed material is collected in an AISI 304 stainless steel container, equipped with a metal handle that enables the bin to be detached from the machine, to avoid any spark that could be generated by the electrostatic charge. Thanks to the 4 sturdy pivoting wheels, the bin can be moved very easily to then dispose of the collected material.
